SUMMARY

Full-stack engineer focused on LLM pipelines and production backend systems. Shipped 2 AI-native applications — cut ATS scoring latency from ~30s to under 1.5s via inference migration and Redis caching; built a 2-model ideation pipeline with strict JSON schema enforcement and live market-signal scraping. Owns the full cycle: backend APIs, LLM orchestration, Docker deployments, and frontend.

EDUCATION

ABES Engineering College, Ghaziabad

Expected July 2027

B.Tech in Computer Science — AKTU CGPA: 8.05/10

Jawahar Navodaya Vidyalaya, Nainital

CBSE Senior Secondary

86% (2022)

CBSE Secondary

93.6% (2020)

PROJECTS

HireOrbit | *TypeScript, Next.js 14, Node.js, Express.js, Docker, Redis, Groq API*

- Cut ATS scoring latency from ~30s to **under 1.5s** by migrating inference to Groq's LPU-based API; layered Redis caching on JD keyword sets — validated across 30+ users spanning SDE, Data Science, and PM job descriptions.
- Designed a 3-stage inference pipeline: Llama 3.1-8B extracts JD keywords, Nemotron-49B scores resume-JD alignment, MiniMax M2.7 generates LaTeX — per-stage JSON schema contracts enforce deterministic outputs across concurrent stateless requests.
- Containerized Tectonic LaTeX compiler in Docker; orchestrated non-blocking `child.process.spawn` calls from Node.js for PDF compilation — event loop never blocked under concurrent load.

DEA — Discovery & Execution Assistant | *Next.js 15, React 19, Tailwind CSS v4, NVIDIA NIM, Cheerio*

- Architected a 2-stage ideation pipeline: GLM-4.7 generates 4 tech-stack-aware project ideas as structured JSON; MiniMax M2.7 (system-prompted as senior architect) expands the selection into a phased execution roadmap — outputs hardened via regex sanitization and `JSON.parse()` recovery.
- Built server-side Cheerio scraper hitting GitHub Trending with 1-hour ISR revalidation to pipe live market signals into idea generation — zero client-side credential exposure.

SKILLS

Languages: TypeScript, JavaScript (ES6+), Java, SQL

Backend: Node.js, Express.js, REST APIs, Redis, MySQL, MongoDB, Docker

Frontend: React, Next.js, Tailwind CSS, Framer Motion, HTML5, CSS3

DevOps: Git, GitHub Actions (CI/CD), Vercel, Docker, Linux (Ubuntu), Postman

ACHIEVEMENTS

- **Open Source — opensearch-java (AWS):** PR merged — added `equals()` and `hashCode()` to `FieldValue`, fixing silent reference-equality failures; backported to 3.x branch.
- **Open Source — Mastra (24.8K★):** Added date range picker to `/evaluation` page, bringing it to parity with `/metrics` and `/observability`.
- **Open Source — traceroot-ai/traceroot:** Added fullscreen toggle and open-in-new-tab to `SessionDetailPanel` — maintainer reviewed and responded.
- **Smart India Hackathon 2025 — Top 50 Finalist:** Ranked top 50 out of 300+ teams as part of Team BeHuman — built an AI-powered train scheduling solution for Kochi Metro Rail Limited (KMRL).
- **Competitive Programming** — 200+ problems on LeetCode; 450+ on CodeChef — consistent practice across arrays, trees, DP, and graphs.
