SUMMARY

AI/backend engineer shipping production LLM systems end-to-end. At Tekurious, architected a NestJS layer routing live student queries across specialized RAG pipelines with fault-tolerant fallback — cutting LLM costs **79%** (\$200 → \$42) on a hybrid BM25 + semantic system over 50,000+ documents. Also cut ATS-scoring latency **20×** (30s → 1.5s) via Groq LPU + Redis caching. Owns the full stack: Docker, async job queues, LLM API design, and every architectural tradeoff.

EXPERIENCE

AI Engineer Intern – Tekurious

July 2026 – Present

- Redesigned a RAG pipeline from scratch — hybrid BM25 + semantic retrieval with Reciprocal Rank Fusion reranking across 50,000+ documents — cut monthly LLM spend from \$200 to \$42 (**79%**) while sustaining a 90%+ top-5 hit rate on a 2,000-query labelled eval set, eliminating a third-party API dependency.
- Engineered chapter-aware document chunking (PyMuPDF-based TOC/heading detection with page-range mapping) on top of the existing sliding-window pipeline, ensuring chunks never cross chapter boundaries — improving retrieval precision and enabling chapter-scoped, syllabus-accurate answers.
- Engineered an async BullMQ/Redis worker architecture for PDF parsing, embedding generation, and Tesseract WASM OCR fallback — cut main API response latency from 12s to under 200ms.
- Built a zero-dependency, stateless JWT auth system in NestJS that directly verifies Google RS256 x509 certs and token claims (iss/aud/exp), enforcing DB-bound RBAC across all protected endpoints.

PROJECTS

RepoMind | *TypeScript, LangGraph, LangChain, Qdrant, BullMQ, Redis, Docker*

- Built a multi-path RAG agent — parallel vector + AST-graph retrieval with self-correcting query refinement — cut hallucinations 40%, lifted context relevance 35%.
- Architected an asynchronous BullMQ ingestion pipeline with Piscina-isolated AST parsing, handling concurrent ingestion requests — 10x Express throughput, 99.9% data consistency across batch processing.
- Enforced 100% multi-tenant isolation via Qdrant metadata filtering; shipped a standalone MCP server for Claude Code/Cursor — 25% faster search on 1,000+ file repos.

Selvedge CRM | *TypeScript, LangGraph, Google Gemini, NestJS, BullMQ, PostgreSQL, Supabase*

- Architected an AI-native CRM agent on LangGraph (ReAct) + Google Gemini with 5 tool-calling functions — turns natural-language marketing intent into fully executed campaigns, zero manual query building.
- Built an async, event-driven messaging pipeline across a 3-service NestJS monorepo — BullMQ + Upstash Redis, concurrency-5 job processing with webhook-based tracking across 5 live delivery states.
- Engineered a segmentation engine on PostgreSQL (Supabase/TypeORM) — 8 dynamic filter dimensions and LLM-context-safe result limiting, preventing token overflow across 500 seeded customers.

HireOrbit | *TypeScript, Next.js 14, Node.js, Express.js, Docker, Redis, Groq API*

- Cut ATS scoring latency from ~30s to **under 1.5s** by migrating inference to Groq's LPU-based API, layered with Redis caching on JD keyword sets — validated across 30+ users spanning SDE, Data Science, and PM roles.
- Designed a RESTful 3-stage inference API — JD keyword extraction → resume-JD scoring → LaTeX generation — with middleware-style JSON schema validation enforcing deterministic outputs across concurrent stateless requests.
- Containerized Tectonic LaTeX compiler in Docker; orchestrated non-blocking `child_process.spawn` calls from Node.js so the event loop never blocked under concurrent PDF compilation load.

SKILLS

Languages: TypeScript, JavaScript (ES6+), Java

Backend: Node.js, NestJS, Express.js, REST, Middleware, WebSocket, PostgreSQL, Redis, MySQL, TypeORM, Firebase, RBAC

Frontend: React, Next.js, Tailwind CSS, Framer Motion, HTML5, CSS3

AI/ML: LangChain.js, LangGraph.js, Qdrant, BullMQ, RAG Pipelines, Vector Retrieval, LLM Orchestration, Prompt Engineering

DevOps: Git, GitHub Actions (CI/CD), Vercel, Docker, AWS (EC2, S3), Nginx, PM2, Linux (Ubuntu)

ACHIEVEMENTS

- Open Source:** [opensearch-java \(AWS\)](#) — PR merged adding `equals()` and `hashCode()` to `FieldValue`, fixing silent reference-equality failures; backported to the 3.x branch.
- Competitive Programming:** 300+ problems on LeetCode; 450+ on CodeChef — consistent practice across arrays, trees, DP, and graphs.

EDUCATION

ABES Engineering College, Ghaziabad

B.Tech in Computer Science — AKTU

Expected July 2027

CGPA: 8.05/10
